

LISTING OF THE CLAIMS

The following listing, if entered, replaces all prior versions of the claims in the present application.

1.-26. (Canceled)

27. (Currently Amended) A method comprising:

in response to a request to perform an operation on a ~~first set of locations of a plurality of locations in a storage-area volume, wherein the volume comprises a plurality of locations:~~

performing the operation upon a given location ~~in the first set of locations~~ of the plurality of locations in the ~~storage-area volume~~ only if the given location is identified in at least one location description of a sieve associated with the operation,

wherein the sieve comprises the at least one location description and a property,

wherein the property comprises information identifying the operation, and

wherein the at least one location description identifies ~~only~~ the set of all ~~storage~~ locations within the ~~storage-area volume~~ upon which the operation can be performed.

28. (Canceled)

29. (Previously Presented) The method of claim 27 wherein the at least one location description is specified by an application program.

30. (Previously Presented) The method of claim 27 wherein the operation is replication.

31. (Previously Presented) The method of claim 27 further comprising: obtaining a set of entities, wherein

the ~~first set~~ plurality of locations comprises a plurality of subsets of locations,
and

an entity in the set of entities has permission to perform the operation on
respective data in at least one of the plurality of subsets of locations.

32. (Previously Presented) The method of claim 27 wherein the at least one location description and the corresponding property are designated by a requester.

33. (Previously Presented) The method of claim 32 further comprising: obtaining a designation of the operation to be performed.

34. (Previously Presented) The method of claim 32 wherein the requester manages data in the ~~storage-area~~ volume.

35. (Previously Presented) The method of claim 32 wherein the requester performs a management function of a set of management functions for the ~~storage-area~~ volume.

36. (Previously Presented) The method of claim 32 wherein the requester identifies a respective physical location in the ~~storage area~~ volume corresponding to each location described in the at least one location description.

37. (Previously Presented) The method of claim 32 wherein each location described in the at least one location description is specified by
a beginning location and
a number of contiguous locations starting at the beginning location.

38. (Previously Presented) The method of claim 32 wherein the at least one location description is designated by a set of indicators, wherein
the set of indicators comprises an indicator for each respective location of the plurality of locations, and
each indicator of the set of indicators indicates whether the respective location for the indicator is described in the at least one location description.

39. **(Currently Amended)** The method of claim 32 further comprising:
obtaining a ~~second~~ set of locations; and
performing a second operation on the ~~second~~ set of locations after the operation is performed on the given location.

40. (Previously Presented) The method of claim 39 wherein the at least one location description and the corresponding property are designated by the requester; and
the operation and the second operation are designated by the requester.

41. (Previously Presented) The method of claim 32 wherein each type of operation in the sieve is performed on the given location if the sieve is specified.

42. (Previously Presented) A system comprising:
 means for storing a sieve associated with an operation; and
 means for performing the following in response to a request to perform the operation on a ~~first set of locations of a plurality of locations in a storage-area~~ volume, wherein the volume comprises a plurality of locations, and wherein the means for performing the following comprise:
 means for performing the operation upon a given location ~~in the first set of locations~~ of the plurality of locations in the ~~storage-area~~ volume only if the given location is identified in at least one location description of the sieve associated with the operation,
 wherein the sieve comprises the at least one location description and a property,
 wherein the property comprises information identifying the operation, and
 wherein the at least one location description ~~only~~ identifies all ~~storage~~ locations within the ~~storage-area~~ volume upon which the operation can be performed.

43. (Canceled)

44. (Previously Presented) The system of claim 42 wherein the at least one location description and the corresponding property are designated by a requester.

45. (Previously Presented) The system of claim 42 further comprising:
means for obtaining a designation of the operation to be performed.

46. (Previously Presented) A system comprising:

one or more storage devices, wherein the one or more storage devices comprise a plurality of locations in a **storage-area volume**; and

a module configured to perform the following in response to a request to perform an operation on ~~a first set of locations of the plurality of locations in the storage-area the volume~~, wherein the module configured to perform the following comprises:

a performing module configured to perform the operation upon a given ~~location in the first set of locations~~ of the plurality of locations in the **storage area volume** only if the given location is identified in at least one location description of a sieve,

wherein the sieve comprises the at least one location description and a property,

wherein the property comprises information identifying the operation, and

wherein the at least one location description **only** identifies all storage locations within the **storage-area volume** upon which the operation can be performed.

47. (Canceled)

48. (Previously Presented) The system of claim 46 wherein
the at least one location description and the corresponding property are designated by a requester.

49. (Previously Presented) The system of claim 46 further comprising:
an obtaining module to obtain a designation of the operation to be performed.

50. (Previously Presented) A computer-readable storage medium comprising:
instructions configured to perform the following in response to a request to
perform an operation on a ~~first set of locations of a plurality of locations~~
in a storage area volume, wherein the volume comprises a plurality of
locations, wherein the instructions configured to perform the following
comprise:

performing instructions configured to perform the operation upon a given location
in the first set of locations of the plurality of locations in the **storage**
area volume only if the given location is identified in at least one location
description of a sieve associated with the operation,
wherein the sieve comprises the at least one location description and a
property,
wherein the property comprises information identifying the operation, and
wherein the at least one location description ~~only~~ identifies all storage
locations within the **storage area volume** upon which the
operation can be performed.

51. (Canceled)

52. (Previously Presented) The computer-readable storage medium of claim 50
wherein
the at least one location description and the corresponding property are designated by a
requester.

53. (Previously Presented) The computer-readable storage medium of claim 50 further comprising:

obtaining instructions to obtain a designation of the operation to be performed.

54. (Previously Presented) A computer system comprising:

a processor; and

the computer-readable storage medium of claim 50, wherein

the computer-readable medium is coupled to the processor.

55-61. (Canceled)

62. (Previously Presented) The method of claim 27 wherein the performing the operation further comprises:

providing a function name to a requestor, wherein

the requestor generated the request.

63. **(Currently Amended)** The method of claim 27, wherein the property also comprises information specifying a characteristic of data stored in the **first set plurality** of locations, wherein the operation is only performed on the given location if data stored in the given location has the characteristic.

64. (Previously Presented) The method of claim 27, wherein the property comprises information identifying a plurality of operations.
